

#### Experiment 14: One-Time Pad (Vigenere Variant):

```
pt = input("Enter Plaintext: ").upper()
key = input("Enter Key: ").upper()

cipher = ""

for i in range(len(pt)):
    c = (ord(pt[i]) + ord(key[i]) - 2*65) % 26
    cipher += chr(c + 65)

print("Ciphertext:", cipher)

plain = ""

for i in range(len(cipher)):
    p = (ord(cipher[i]) - ord(key[i])) % 26
    plain += chr(p + 65)

print("Decrypted Text:", plain)
```

#### Output:

```
Enter Plaintext: HELLO
Enter Key: DKGSR
Ciphertext: KORDF
Decrypted Text: HELLO

=== Code Execution Successful ===
