

Experiment 15: Additive Cipher Frequency Attack:

```
cipher = input("Enter Ciphertext: ").upper()
```

```
freq = {}
```

```
for ch in cipher:
```

```
    if ch.isalpha():
```

```
        freq[ch] = freq.get(ch, 0) + 1
```

```
most = max(freq, key=freq.get)
```

```
key = (ord(most) - ord('E')) % 26
```

```
print("Most frequent letter:", most)
```

```
print("Guessed Key:", key)
```

```
plain = ""
```

```
for ch in cipher:
```

```
    if ch.isalpha():
```

```
        p = (ord(ch) - 65 - key) % 26
```

```
        plain += chr(p + 65)
```

```
print("Decrypted Text:", plain)
```

Output:

```
Enter Ciphertext: KHOOR
```

```
Most frequent letter: O
```

```
Guessed Key: 10
```

```
Decrypted Text: AXEEH
```

```
